

I am submitting the comment in support of the SBE's request for a final 6-month extension to afford BAS licensees the opportunity to submit missing or erroneous information in the ULS database.

I am the Chief Engineer for three FM stations and work as a private contract engineer. The process to verify the ULS database, gather missing information and then update on form 601 can involve many hours of time and research. I believe this waiver is reasonable and keeping with the goals of the FCC in that a more accurate data base will be obtained by allowing broadcasters the necessary time to accurately and fully investigate the matter. I recommend the FCC immediately grant the request of the SBE.
